

# REJUVENATION SET

REVITALISATION CELL FACTORS  
(for man and woman)

## ARE THERE ANY SIDE EFFECTS?

Rejuvenation Cell Factors are well tolerated. Nevertheless, during the course of treatment wheal and flare reactions or itching might occur in the area around the puncture site. In most instances, it is sufficient to treat local reactions of this kind with simple means such as ice bags or cooling creams.

Reactions in the form of increased body temperature or mild fever are not to be regarded as intolerance phenomena. In the case of patients who display a considerable deficiency of the immune system these reactions indicate that the desired activation of the immune system is taking place.

Many thousands of patients have been treated with Rejuvenation Cell Factors and have displayed excellent tolerance. However, please consult your medical doctor on possible side effects as new data might be available.

INFORMATION FOR PATIENTS

## WHY DO WE AGE?

Our cells are regularly replenished during our lives through division of cells. This process is very efficient in our youth. As a result, during the early stages of life, we have healthy and active cells which give us our vibrant physical beauty and a dynamic body and mind. However, the process by which our bodies replace old and used cells becomes less effective at rejuvenation the older we get. The cell division process generates cells that are overtime less efficient and accurate as they were before leading to malfunctions in the cells and eventually the body. This is why we age.

Individual organs or tissues such as hair and skin often are the first noticeable signs of aging. Broader organ systems like our nervous, digestive, endocrine, circulatory and respiratory system soon follow. Other outside factors expedite the cell degeneration like poor nutrition, mental and physical stress as well as pollution. The result therefore can be for many of us premature wrinkles, hair loss, chronic fatigue and a weak immune system.

## HOW TO REJUVENATE YOURSELF?

In order to combat the process of aging and to protect yourself from external factors, scientists developed a unique rejuvenation set of 10 different cell factors to stimulate the organs which are most known to affect your cell degeneration. These cell factors galvanize and rejuvenate deteriorated cells and trigger cell production. These rejuvenation cell factors will jump start and support your natural cellular rejuvenation process and return you to a lower cellular age. This, in return will visibly influence not only your bodies appearance but make your overall beauty shine again. Our true age is determined by the quality of our cells.

## REJUVENATION SET

Scientist classified 10 different organs to be most valuable to reduce cell degeneration and prevent aging. It is most important to continuously stimulate and rejuvenate these organs to keep you young.

### 1. Thymus

Switchboard of the immune system, therefore countering all forms of immune weakness.

#### Healthy Thymus Cells can:

- 🌐 fight cancer cells and infections by producing white blood cells and antibodies
- 🌐 fight autoimmune diseases
- 🌐 combat degenerative diseases of the locomotor apparatus
- 🌐 counter viral diseases, chronic fatigue, stress related symptoms, depression

### 2. Umbilical Cord

High concentrated Mesenchymal Cells (Stem Cells) from the umbilical cord play a crucial part in maintaining the body's immune defenses and metabolism.

#### Healthy Umbilical Cord Cells can:

- 🌐 prevent immune system diseases
- 🌐 reduce acute and chronic infections
- 🌐 limit functional impairment of major organs related to aging
- 🌐 stimulating cell growth leading to more new healthy and smooth skin cells

### 3. Placenta

Supplies oxygen and nutrients which are indispensable for a normal cell evolution.

#### Healthy Placenta Cells can:

- 🌐 reduce menopausal symptoms
- 🌐 reduce vascular sclerosis and heart disease
- 🌐 reduce hormonal complaints
- 🌐 prevent blood pressure problems
- 🌐 Increases the oxygen flow around blood cells, therefore fighting wrinkles, pigmentation, neurodermatitis, psoriasis and other related skin diseases

## REJUVENATION SET

### 4. Liver

Metabolism organ processing nutrients absorbed by the intestine to form energy reserves.

#### Healthy Liver Cells can:

- ④ filter harmful substances and bacteria
- ④ prevent chronic digestive disorders
- ④ combat hepatitis and cirrhosis
- ④ prevent gallbladder disease
- ④ detoxify the body leading to a whiter skin

### 5. Heart

Pumps oxygen enriched blood throughout our body.

#### Healthy Heart Cells can:

- ④ combat cardiovascular diseases
- ④ prevent myocardial infarction
- ④ be supportive in cardio stress treatment
- ④ prevent cardiomyoliposis and angina pectoris
- ④ maintain a strong heart to keep a vital and dynamic life

### 6. Brain

Center of the nervous system, information processing, perception, motor control, learning and memory.

#### Healthy Brain Cells can:

- ④ reduce memory loss
- ④ stimulate mental activity
- ④ fight Alzheimer's and Parkinson's disease
- ④ reduce migraine and depression

## 7. Spleen

Setting up and priming the immune system. Recognizes and breaks down over-aged blood cells.

### Healthy Spleen Cells can:

- ⦿ prevent osteoporosis
- ⦿ lower risk of arteriosclerosis
- ⦿ fight immune weaknesses
- ⦿ fight cancer cells
- ⦿ prevent chronic inflammations

## 8. Adrenal Gland

Hormone-producing gland. Responsible for circulating adrenaline to stimulate our senses.

### Healthy Adrenal Gland Cells can:

- ⦿ be used in pain relief and stress treatment
- ⦿ stimulate sexual hormones
- ⦿ prevent Addison's disease or Cushing's syndrome

## 9. Testis (for man)

Male reproductive organ which produces sperm.

### Healthy Testis Cells can:

- ⦿ prevent male hormonal weaknesses
- ⦿ counter infertility
- ⦿ prevent "Midlife Crisis", loss of libido and erectile disorders
- ⦿ fight aging and exhaustion

## Ovary (for woman)

Female reproductive organ which produces egg cells.

### Healthy Ovary Cells can:

- ⦿ prevent female hormonal weaknesses
- ⦿ reduce menstrual disorders
- ⦿ counter dysmenorrhea, infertility, menopause, loss of libido
- ⦿ fight aging and loss of passion

## 10. Total Organ Mix

A unique composition of multiple cells from various organs targeting our rejuvenation system.

### Healthy Total Organ Mix Cells can:

- ⦿ increase the bodies metabolism and therefore lead to weight loss
- ⦿ combat rheumatism
- ⦿ reduce allergies
- ⦿ target skin complaints like age spots

## HOW IS THE REJUVENATION SET CARRIED OUT?

The "classic" course of treatment consists of 10 injections over a 1 to 2 week period. The Rejuvenation Set is injected into the gluteal muscle and causes virtually no pain. The therapy plan can be altered according to individual conditions and requirements. In some chronic symptoms, therapeutic results can be improved by additional injections of Thymus, Placenta and Umbilica Cord Cell Factors in the form of 1 to 2 injections per week over a period of 2 to 3 months.
